

Service Manual – McDonald’s Sweet Tea Brewer

Important Safeguards/Symbols

This appliance is designed for commercial use. Any servicing other than cleaning and routine maintenance should be performed by an authorized Wilbur Curtis Co., Inc. service technician.

- DO NOT immerse the brewer in water or any other liquid.
- To reduce the risk of fire or electric shock, DO NOT open service panels. There are no user serviceable parts inside.
- Keep hands and other items away from hot areas of the brewer during operation.
- Never clean with scouring powders or harsh chemicals.

Symbols:

WARNING/CAUTION – To advise about conditions that may result in property damage, personal injury or death

IMPORTANT – Notes about proper operation

Sanitation requirements

Models covered

- STBA48026

WARNING: Equipment must be installed to comply with applicable federal, state, and local plumbing/ electrical codes having jurisdiction.

WARNING: Follow this setup procedure before attempting to use this brewer. Failure to follow these instructions can result in injury and/or void of warranty.

CAUTION: DO NOT connect the brewer to hot water. The inlet valve is not rated for hot water.

IMPORTANT: After setup, run a FULL brew cycle. Place a tea container to catch both hot water from the brew basket and dilution water from spout on the front cover.

Following are the factory settings for the STBA48026 Iced Tea Brewing System:

- Brew Temperature = 200°F
- Brew Volume = Set to dispensing vessel requirements

Usually, there will never be a reason to change the programming on the system’s G3 series controller. However, should you need to make slight adjustments to meet your brewing needs, programming instructions are provided later in this manual.

System Requirements:

- Water source: 50 – 90 psi (minimum flow rate of 3.0 gpm)
- CO²/compressed air source: 50 psig max.
- Electrical: See schematic in this manual

SETUP STEPS

NOTE: Some type of water filtration device must be used to maintain trouble-free operation. In areas with extremely hard water, we suggest that a sedimentary, taste and odor filter be installed. This will prolong the life of your brewing system and enhance tea quality.

1. Locate the brewer on a secure surface. Level it left to right and front to back by rotating the feet on the 4 corners.
2. Connect water lines from the water filter to the brewer. Plumb water lines. A 1/2" hose barb has been supplied for water line connections. See page 3 for location.

WARNING: Use the leveling legs to level the brewer only. Do not use them to adjust brewer height. Do not extend them higher than necessary.

NSF International requires the following water connection:

1. A quick disconnect or additional coiled tubing (at least 2x the depth of the brewer) is required so that the brewer can be moved for cleaning underneath.
2. This equipment is to be installed with adequate back-flow protection to comply with applicable federal, state and local codes.
3. Water pipe connections and fixtures directly connected to a potable water supply shall be sized, installed and maintained in accordance with federal, state and local codes.

Use tubing sized sufficient to provide a minimum of 3.0 gpm for the CHILLED WATER connections.

3. Connect the CO² or compressed air line.
4. Connect the brewer to an electrical outlet with the appropriate amperage rating (see serial tag on brewer).

WARNING: The CO²/ compressed air input pressure must not exceed 50 psig.

ISO 9001:2008 REGISTERED

continued...

SETUP STEPS (CONT.)

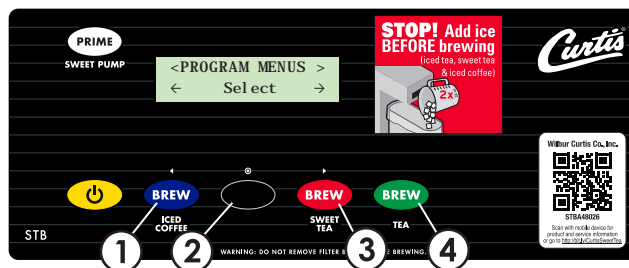

- Connect two Bag-in-Box (BIB) sweeteners to the brewer sweetener supply hoses as instructed on page 5. Connecting two bags allows the brewer to continue operating if one bag runs out.
- Turn on the main power switch (toggle switch, behind the brewer). The heating tank will start to fill. When the water level in the tank rises to the correct volume, the heating element will start automatically. This eliminates the possibility of element burnout caused by heating with an empty tank.
- Place a quart or larger container under the spout assembly. Press and hold the **PRIME** button to draw the sweetener through the system. Release the **PRIME** button when sweetener begins to flow out of the spout without any air bubbles (about 20 ounces).

i **IMPORTANT:** The sweetener must be between 50°F and 120°F (10°C and 49°C) for proper operation.

i **IMPORTANT:** For proper operation, the sweetener pumps must be primed before using for the first time. After initial priming, the pumps prime automatically when sweetener bags are replaced.

- The heating tank will require 20 to 30 minutes to reach operating temperature (200°F) indicated by **Ready to Brew** on the display.
- Enter programming mode on the universal control module (UCM) to choose the brewer operation mode (Model Select). Turn off power at the ON/OFF (yellow) button. Press and hold the **green BREW** button (button 4, see diagram below). While holding down the BREW button, press and release the ON/OFF button. Continue to hold the BREW button, until **Entering Programming Mode** appears on the screen. Enter the access code when prompted (**Enter Code**). The default code is 1-2-3-4. **< Program Menus >** will appear on the display.

Programming Buttons

- Press button 3 (▶) repeatedly until **Model Select** appears on the display. Press button 2 (⊙) to enter the **Model Select** sub-menu. Press button 3 (▶) repeatedly until the desired model appears on the display. Press button 2 (⊙) to save and exit. The UCM will reset.
- Center an empty tea dispenser under the brew basket. Press the SWEET TEA BREW button to run one full brew cycle with the brew basket empty (**Ready to Brew** must be on the display). This process will purge the hoses and valves of any remaining air.

Sweet Tea Brix Measurement Procedure

1. Brew a batch of sweet tea into a tea dispenser according to the brewing instructions on the following page.
2. Wait for **Brewing** to disappear from the display. Allow the tea to cool to room temperature.
3. Dispense a full cup of cooled tea from the dispenser into a clean, empty 16 ounce cup.
4. Use a refractometer to test the Brix level of the tea according to the refractometer manufacturer's instructions. The reading should be between 9.8 and 12.8 for regular sweet tea and between 11.8 and 14.8 for southern sweet tea.
5. Dispense a second full cup of tea into a separate, clean, empty 16 ounce cup from the same dispenser. Run the refractometer test a second time to validate the results. The reading is considered accurate when the test is run twice on the two cups of tea and the results are approximately the same. If the results vary, try running the two tests again.
6. If the Brix level is outside of specifications, check the following:
 - A. Check to make sure that the sweetener BIB feed system is properly primed. Air bubbles in the system will affect the Brix level.
 - B. Was a full brew cycle run to remove any additional air from the system?
 - C. Check to make sure that the tea dilution time is properly set for the model selected, 1:10 for regular sweet tea, 1:05 for southern sweet tea.
 - D. Did you run the refractometer test twice to validate the results?
 - E. Does the water supply meet specifications (3.0 gpm with a water pressure between 50 and 90 psi)?

All the above factors can affect the Brix measurement. If all of the above conditions have been met, and the Brix measurement is out of specifications, call technical support.

REAR PANEL CONNECTIONS

BREWING INSTRUCTIONS

WARNING: HOT LIQUID - TO AVOID SCALDING, AVOID SPLASHING. DO NOT REMOVE BREW BASKET WHILE "BREWING" APPEARS ON THE DISPLAY.

1. If it is not on, make sure that the toggle switch on the back of the brewer is in the ON position, then press the ON/OFF (yellow) button on the front panel. **Ready to Brew** must be on the display.

2. If brewing iced tea, place a tea pouch in the brew basket.

3. If brewing iced coffee, place a filter in the iced coffee brew basket. Fill with the proper amount of ground coffee. Level the coffee in the filter.

4. Slide the brew basket into the brew rails. Push it all the way in until it stops.

5. Put 64 oz. of ice in the appropriate serving container, then place it on the brew deck.

6. Select a **BREW** button and press to start. **IMPORTANT:** The flow of tea/coffee may pause for up to 10 seconds during brewing. This is normal.

TEA TIPS

- Store tea bags in a dark, cool and dry place away from strong odors and moisture. Do not refrigerate.
- Make sure your equipment is clean at all times. Clean tea brewing equipment at least once per day. Sanitize equipment at least once per week.
- Do not let fresh-brewed iced tea sit at room temperature for more than 8 hours.

WARNING: DO NOT refrigerate unused tea overnight for later consumption.

As with other food products, if you adhere to proper preparation, holding and sanitation procedures, fresh-brewed iced tea is a safe beverage. The primary cause for high bacteria counts found in tea from food service businesses is related to excessive holding times and/or poor cleaning and sanitizing procedures.

SWEETENER REPLACEMENT/CONNECTION PROCEDURE - BAG-IN-BOX (BIB)

i The **PRIME** button is used to fill the sweetener hoses when the unit is first installed or after servicing. The system automatically refills the hoses when the BIB is changed.

When one of the boxes runs out of sweetener, the **Change Sweetener** message appears on the display. Replace the empty box as soon as possible, as instructed below. After the **Change Sweetener** message appears, the brewer will allow for eight more batches of sweet tea to be brewed before the **Sweet Tea Lockout** message appears. When this message appears, the brewer will not allow sweet tea to be brewed (only unsweetened tea). Replace the BIB, then press **PRIME** to unlock the sweet tea function.

Disconnecting an Empty BIB

1. Locate the empty BIB sweetener container (the lightest one).
2. Remove the QDC at the end of the brewer sweetener hose from the empty BIB container.

Connecting a New BIB

3. Place the new BIB container on the rack and remove the cardboard cover labeled OPEN HERE.
4. Twist and remove the shipping cap that covers the spout.

5. Thread the QDC on the brewer sweetener supply hose onto the bag spout. During operation, make sure that the BIB is in an inverted position, with the spout and connector pointed downward. This allows for more complete use of the product while the bag empties. See the *Sweetener Schematic* on page 6 for an example of proper sweetener connection.
6. Press **PRIME** to clear the **Change Sweetener** message.

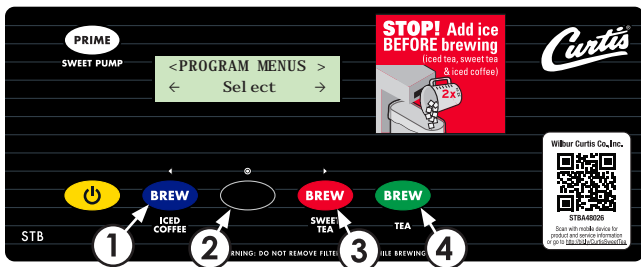

SWEETENER SCHEMATIC

PROGRAMMING

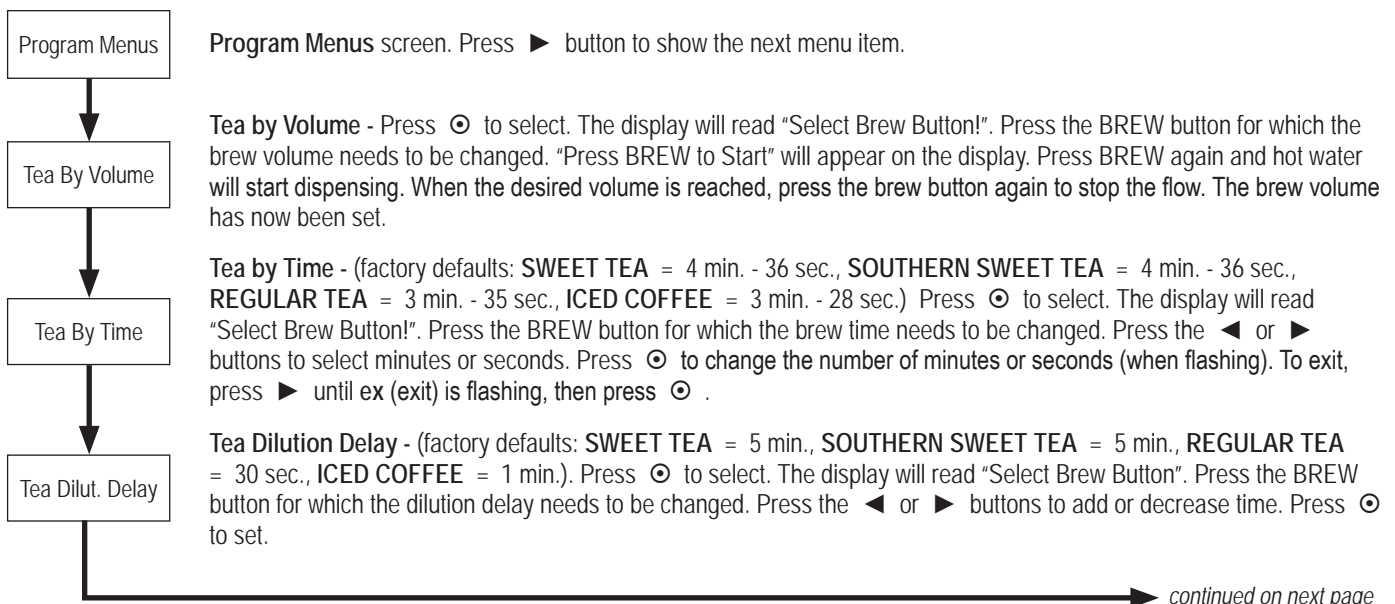

ENTER PROGRAMMING MODE: Turn off power at the ON/OFF (yellow) button. Press and hold button 4 (see below), while you press and release the ON/OFF button. Continue to hold button 4. First **Entering Programming Mode** will appear on the display, then **Enter Code** will appear. Release button 4 and enter the 4-digit access code, the digits 1-4 correspond to the buttons in the diagram below. The default code set at the factory is 1-2-3-4. **< Program Menus >** will be displayed.

All programming selections are performed with the three center buttons. The symbols above the buttons are:

- ◀ Scroll left (button 1)
- ⊙ SELECTION or ENTER to save new parameter (button 2)
- ▶ Scroll right (button 3)

To exit: Pressing ⊙ when **Exit** is displayed, exits program mode and returns brewer to normal operation.

PROGRAM MENUS (CONT.)

Tea Dilution Volume - Press **⊙** to select. The display will read "Select Brew Button!". The display will read "Press BREW to Start". Press the BREW button for which the dilution volume needs to be changed. Press BREW again and hot water will start dispensing. When the desired volume is reached, press the brew button again to stop the flow. The tea dilution volume has now been set.

Tea Dilution Time - (factory defaults*: **SWEET TEA** = 54 sec., **SOUTHERN SWEET TEA** = 49 sec., **REGULAR TEA** = 1 min. - 40 sec., **ICED COFFEE** = 42 sec.) Press **⊙** to select. The display will read "Select Brew Button!". Press the BREW button for which the dilution time needs to be changed. Press the **◀** or **▶** buttons to select minutes or seconds. Press **⊙** to change the number of minutes or seconds (when flashing). To exit, press **▶** until **ex** (exit) is flashing, then press **⊙** .

Tea Drip Out - (factory defaults: **SWEET TEA** = 4 min., **SOUTHERN SWEET TEA** = 4 min., **REGULAR TEA** = 3 min., **ICED COFFEE** = 3 min.) Press **⊙** to select. The display will read "Select Brew Button!". Press the BREW button for which the Drip-Out needs to be changed. Press the **◀** or **▶** buttons to add or decrease time. Press **⊙** to set.

Sweetener Count* - (factory default: **SWEET TEA** = 42, **SOUTHERN SWEET TEA** = 50) Press **⊙** to select. Press the SWEET TEA BREW button. Press the **◀** or **▶** buttons to increase or decrease the count. Press **⊙** to set.

Blend Time - (factory default: 13 sec.) Press **⊙** to select. Press the SWEET TEA BREW button. Press the **◀** or **▶** buttons to select seconds. Press **⊙** to change the number of seconds (when flashing). To exit, press **▶** until **ex** (exit) is flashing, then press **⊙** . NOTE: Minutes are not programmable.

Prime Sweetener Pump - Performs the same function as the **PRIME** button on the front of the control panel. Press and **hold** **⊙** to prime both sweetener pumps. Turns each sweetener pump on for 3 seconds alternately. Alternates back and fourth between both pumps until **⊙** is released. Be sure to have a quart or larger container under the spout during the priming process.

Prime On/Off - (factory default: **On**) Press **⊙** to select. Press **◀** or **▶** to change between **On** and **Off**, then press **⊙** to set. Enables/disables the **PRIME** button.

Temperature - (factory default: 200°F) Press **⊙** to select. Press **◀** or **▶** to increase or decrease the temperature, then press **⊙** to set.

Energy Save Mode - (factory default: **Off**) Press **⊙** to select. Press **◀** or **▶** to change between **On**, **Off** or **On-140°F**, then press **⊙** to set. When set to **On**, the brewer will automatically shut off 4 hours from the last brew. When the feature is **Off**, the brewer does not use the energy saving feature. In the **On-140°F** position, the temperature goes down to 140°F if the brewer has not brewed in 4 hours. This saves energy by lowering the tank temperature during periods of non-operation.

Brew Count Odometer - (resettable) Press **⊙** to display the total brew cycles. Press **⊙** to reset, or press the button below **ex** to exit without resetting.

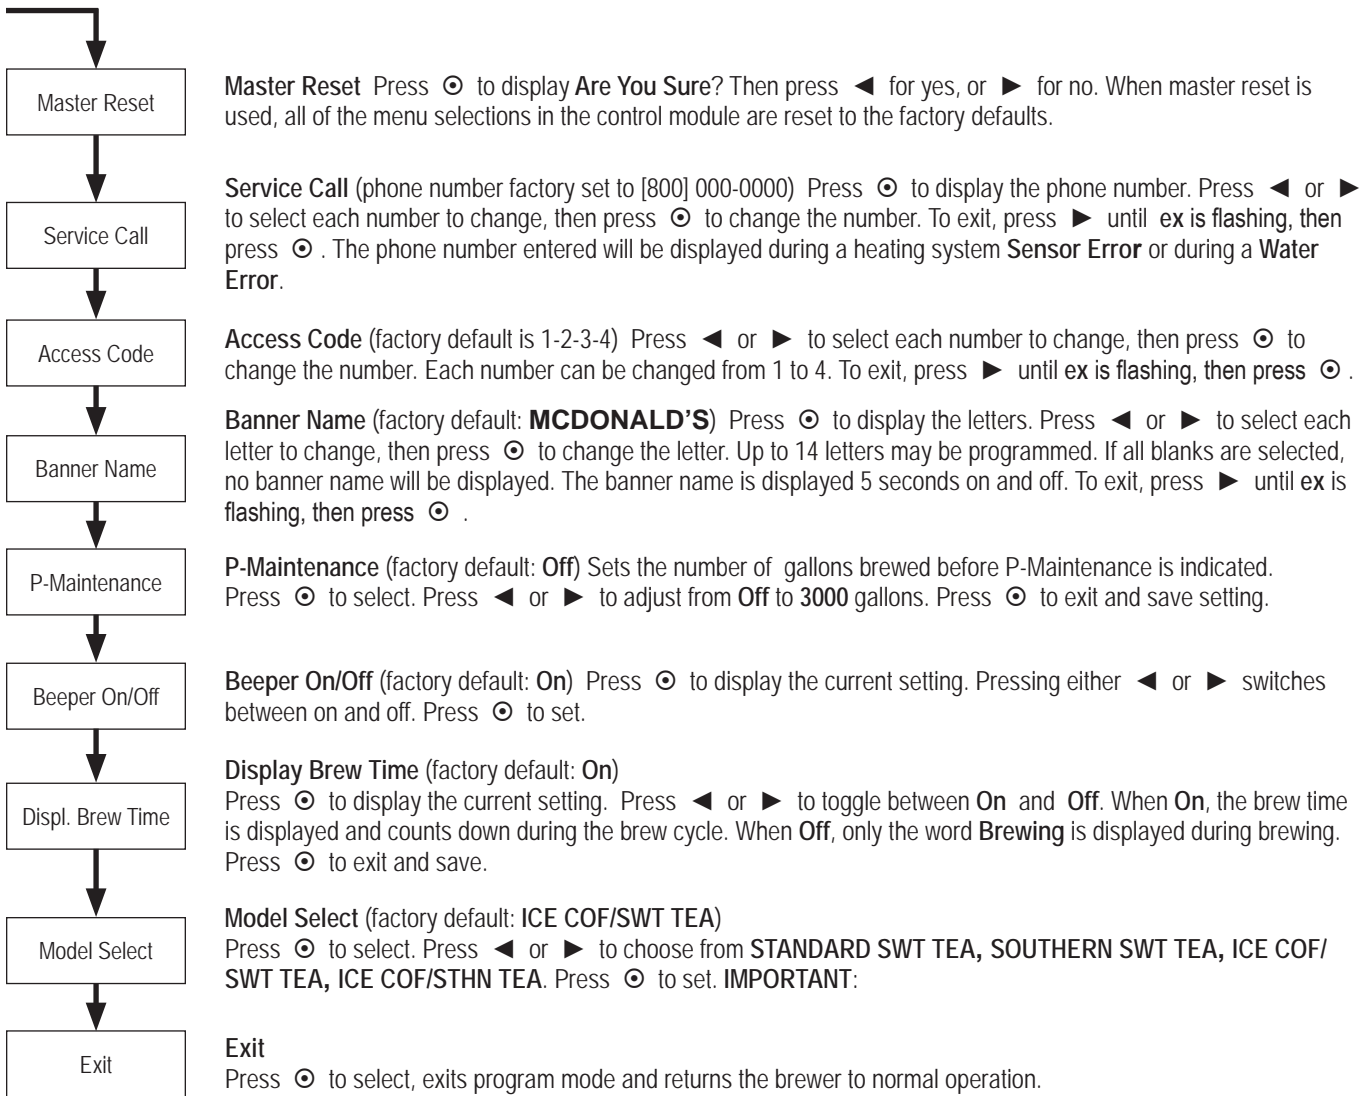

Brew Count Total - (not resettable)
Press **⊙** to select (display returns to previous display after 5 seconds). Shows the total gallons and total number of brew cycles on the brewer.

Cold Brew Lock - (factory default: 5°F) Press **⊙** to select. Press **◀** or **▶** to select the desired setting (**5°F**, **15°F** or **Off**). Press **⊙** to set. The cold brew lock feature allows the brewer to brew at three different temperature levels from the actual set point. The first setting is within 5 degrees of the set point, next is within 15 degrees of the set point, **Off** is within 30 degrees of the set point for the **Ready to Brew** message, however the brewer will brew at any temperature.

TEA BREWER CLEANING

CAUTION: DO NOT use undiluted bleach or chlorine.

SWEET TEA MIXING SYSTEM CLEANING AND SANITIZING

LIQUID LEVEL PROBE

WARNING: Electric Shock Hazard
Disconnect electrical power before removing access panels.

WARNING: Scald and Burn Hazard
Allow water and brewer to cool before disassembly.

Daily Cleaning

1. Wipe any spills, dust or debris from the exterior surfaces with a damp cloth. The outside surfaces of the brewer should be cleaned with stainless steel polish only, to prevent scratches.
2. Clean the spray head and domed area around the spray head with a mild detergent and warm water solution. Scrub well to remove residue. Rinse with clear water. Dry with a clean cloth.
3. Remove and thoroughly clean and sanitize the entire plastic brew basket, the four legs and the basket orifice using a mild detergent solution and hot water. Dry it before use or put it through a dishwasher cleaning cycle, then dry before use.
4. Wash the tea container. Clean the container and the top cover with a detergent solution.

Weekly Cleaning and Sanitizing

Use a concentrated cleaning solution to simplify the cleaning procedure. This procedure requires a one gallon bucket of cleaning solution of warm water and a granulated concentrated sanitizer/cleaner, diluted as specified by the manufacturer in a one gallon bucket of clean warm water (maximum 120°F).

1. Make sure the brewer is on and the water supply is hooked up.
2. Remove both quick disconnect connectors (QDCs) from the tea sweetener bag-in-box (BIB) product bags.
3. Attach male hose fittings to both QDCs. **IMPORTANT:** The cleaning process will not work without both male hose fittings attached. See the diagram on the following page.
4. Immerse both QDCs, with male hose fittings attached in the bucket of cleaning solution.
5. Place an empty tea container on the brew deck and an empty brew basket below the spray head.
6. Press and hold the **PRIME** button to draw the cleaner through the system. Release the **PRIME** button when there is about 2 inches of cleaning solution in the bottom of the bucket under the brew basket.
7. Allow the brewer to sit for the amount of time specified by the sanitizer/cleaner manufacturer with the cleaning solution in the sweetener hoses/lines before flushing the cleaning solution.
8. Flush the system by filling a one gallon container with clean hot water (no cleaning solution). Immerse BOTH quick disconnect connectors, with male hose fittings attached, in the bucket of hot water. Press and hold the **PRIME** button to draw the hot water through hoses until all the cleaning solution has been flushed from the system.
9. Discard solution that poured into the container under the brew basket.
10. Remove the QDCs from the hot water and remove the male hose fittings.
11. Reconnect both QDCs to the BIB sweetener bags.
12. Use the **PRIME** button to prime both sweetener lines.

The cleaning interval for the probe is determined by the user or the service technician, based on water conditions. Use of a water filter and the type of water filter used impacts the service interval. The service interval can be from one month to several years, based on water conditions. However, replacing the probe is preferred to cleaning it.

1. Unplug the power cord and shut off the water supply.
2. Remove the top cover of the brewer. Locate the water tank and remove the top cover. Make sure the tank and water inside have cooled before proceeding to the following steps.
3. Drain the tank to a level about 3" below the tip of the probe.
4. Clean the tip of the probe using a Scotch-Brite™ scuff pad.
5. If a white residue is still visible on the probe, remove the probe and soak it in vinegar or a scale removing chemical. Repeat this step until the probe is clean.
